

DECON 2019 Students Have Changed a Life!

Cyril (Kenya)

Cancer is a bad word, no matter where you live. In the U.S. we can hope, even expect that a tumor will be removed, and cancer neutralized, but in Kenya, not so. 27-year-old Cyril, was diagnosed with a transfemoral tumor in 2012. It was removed, but the doctor took the rest of his leg as well. With a family to support and no way to work, Cyril became depressed. His body survived cancer, but his dreams did not.

That is when We Help Two and its partner clinic became a part of Cyril's story. They provided a new leg and the training to use it. He is now on working again and happy to be supporting his young family.
